**Statement of interest – Why should you be appointed to this board/commission?**

I believe my work and professional background could be of use to the Commission and would complement the Commission's current work. I work in energy efficiency, in particular communications and outreach around energy efficiency programs and opportunity. I came to that work after teaching energy efficiency and carbon management, and coordinating energy efficiency and carbon management efforts on college campuses. My doctoral work focused on energy efficiency in historic buildings and I have worked on several projects that addressed how to best implement energy efficiency and renewable energy strategies in historic districts and buildings.

I think my work could be of use to the Commission as the city works to meet its sustainability and carbon management goals: in particular, I think there are ways the city could leverage and promote efficiency incentives through cooperative purchasing and community outreach efforts.

I hope my background in architectural history and work on balancing historic preservation and efficiency commitments could also be of use considering the historic nature of Annapolis's built environment.
