

# Annapolis Water & Sewer System Evaluation – Asset Management Strategies City Council Update-July 2016

# Project approach objectives

- Complete a desktop condition assessment to support initiation of high priority projects.
- Development of a comprehensive plan for prioritization and for long-term asset management strategies for repair and replacement.

# Asset Management Framework

# Water pipe data

|                                                               |                                                 |                                                |
|---------------------------------------------------------------|-------------------------------------------------|------------------------------------------------|
| <b>1.5 billion gallons</b> of potable water produced per year | <b>8 mgd</b> water treatment capacity           | <b>140 miles/7,185</b> segments of water pipes |
| <b>1</b> water treatment plant                                | <b>5</b> elevated water storage tanks           | <b>2,900</b> water valves                      |
| <b>8</b> groundwater wells ( <b>3</b> aquifers)               | <b>2</b> 1-MG/each finished water storage tanks | <b>1,240</b> fire hydrants                     |

## Water Distribution Pipe In-Service per Installation Decade

## Sewer pipe data (129 miles / 3,618 segments)

|                                       |                                                         |                                           |
|---------------------------------------|---------------------------------------------------------|-------------------------------------------|
| 11,200 sewer accounts                 | 5.0 mgd average sewer collection system flow            | 4,892 acre sewer service area in the City |
| 123 miles of pipes and 3,542 manholes | 1 wastewater treatment plant (co-owned with the County) | 25 sewer lift stations                    |

## Sewer Collection Pipe In-Service per Installation Decade

# Desktop Condition Assessment

# Water system assets

## Correlated Water Main Break Historical Data with Asset Inventory Using GIS

## Soil GIS data contains soil map units (e.g. AdA)

- Soil map units' corrosivity for steel from USDA for different soil type
- 77 different soil types in the selection area on the right
- Spatial link between pipes and soil corrosivity

# Consequence of Failure

# COF Scoring Guide for Each of the Six Elements

| COF | Loss of Service Impact (E01)                                                                 | Integrity & Dependability (E02)                                                                                                            | Public Health & Safety (E03)                               | Fiscal (E04)    | Resource & Operational Impact (E05)                          | Environment (E06)                                                              |
|-----|----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|-----------------|--------------------------------------------------------------|--------------------------------------------------------------------------------|
| 0   | No impact                                                                                    | No impact                                                                                                                                  | No impact                                                  | Up to \$500     | No impact                                                    | No impact                                                                      |
| 1   | Less than 100 customer-hours without service                                                 | Alert posted on website but no media attention; no critical customers affected                                                             | First aid only                                             | Up to \$5,000   | Less than 8 resource hours required for correction           | Imperceptible environmental impact                                             |
| 2   | Up to 500 customer-hours without service OR one critical customer out of service             | Minor media reporting and/or less than 10 complaints; commercial customers affected                                                        | Minor injury or sickness (e.g. sprains, bruises, sickness) | Up to \$50,000  | Between 8 and 24 resource hours required for correction      | Regulatory sanction possible                                                   |
| 6   | Up to 1,000 customer-hours without service OR more than one critical customer out of service | Regional media coverage and/or concern from politicians and other stakeholders; business district customers affected                       | Moderate injury (e.g. broken bones)                        | Up to \$100,000 | Between 24 and 200 resource hours required for correction    | Regulatory sanction likely                                                     |
| 4   | Up to 2,000 customer-hours without service                                                   | National media coverage and/or serious concern from politicians and other stakeholders; Gov't, schools, veterinary offices affected        | Major injuries and/or some death                           | Up to \$250,000 | Between 200 and 1,000 resource hours required for correction | Regulatory sanctions; damage reversible in less than one year                  |
| 5   | More than 2,000 customer-hours without service                                               | Loss of a rate increase and/or an organizational restructuring; Critical care units, medical service providers; dialysis patients affected | Substantial death, widespread injury and sickness          | Over \$250,000  | More than 1000 resource hours required for correction        | Extensive regulatory sanction virtually assured; damage reversal over one year |

# Attributes Used in Calculation of Ratings for the Six COF Elements

|                                              | Elements                     |                                 |                              |              |                                     |                   |
|----------------------------------------------|------------------------------|---------------------------------|------------------------------|--------------|-------------------------------------|-------------------|
| Attributes                                   | Loss of Service Impact (E01) | Integrity & Dependability (E02) | Public Health & Safety (E03) | Fiscal (E04) | Resource & Operational Impact (E05) | Environment (E06) |
| Affected critical customers                  | X                            | X                               | X                            |              |                                     |                   |

# Annual Costs of Sewer Collection System Asset Management Strategies for the Next 15 Years

## Next Steps

- Develop Team Charter to Implement Strategies
- Finalize Reports
- Continue/Initiation of Priority Projects
- Finalize Asset Management Software Review
- Identify AM Program Implementation Performance Measures
